

Technical Data Sheet

Product: DT040

THE EDGE
ON SAFETY

DESCRIPTION

The profile is designed for a smooth transition between 2mm vinyl and carpet (tile) without the potential of a vertical trip hazard between the two products. The profile is ramped slightly to provide a tidy transitions.

MATERIAL

T6 6063 Alloy aluminium - Mill Finish.

Standard 2.5 Meter Lengths.

DIMENSIONS

EXAMPLE

In this example, using leveling compound and vinyl, DT040 has been used to create a smooth even transition. The carpet is butted up to the end of the profile for a tidy finish.

For PDF and CAD drawings with full dimensions and installation guides, please refer to our website www.tredsafe.co.nz

Release: January 2019

Information given in this data sheet is based on the current state of knowledge. This does not exempt the purchaser from carrying out his own careful inspections of incoming goods and their suitability for local building codes. We reserve the right to make changes to the product data in the course of technical progress or due to operationally related further development. Owing to factors beyond our control during application, recommendations given in this data sheet require tests and experiments by the customer. Our recommendations do not exempt the customer from the obligation to check any infringements of third-party rights himself and eliminate them if necessary. The suggestions for product use are not equivalent to a warranty of its suitability for the recommended purpose.

Each new release of this data sheet supersedes the previous one.
